BE PATRIOTIC PLANT A LIVING

DECORATIVE -:- PRACTICAL -:- FRUITFUL

It might interest you to know that we have planted several V Shaped Espalier Dwarf Trained fruit trees on some of the most prominent estates in the country. Many of our customers tell us that they now refer to these trees as Victory Fruit Trees. You too can grow one or more of these V Shaped Fruit Trees in your Victory Garden to make it complete.

Of the many interesting patterns which can be made with Victory Trees, the most attractive is the Victory Fence. It consists of a row of Victory Trees planted two feet apart from each other to give an effect of diagonal lattice work of living green exquisitely beautiful when covered with blossoms in springtime or richly colored fruit in fall. 5 Victory Trees are required to complete the lattice design. This pattern may be extended by adding additional trees. Any garden with a space of 12 feet or more in width affords room for a Victory Fence. Illustration featured in our catalog. V-Shaped Espalier trees are as hardy as any other fruit trees and they require even less care than large trees. Because of their dwarf characteristics, V Trees will take up practically no space—there is room for at least one tree in the smallest garden. No need waiting years for fruit—V Shaped trees are ready to bear. Because the sun penetrates through all their branches, a single tree will produce an average of 60 big, tender, juicy, luscious, and superior quality fruits every year.

ORDER NOW—The Supply is Limited

Varieties:

APPLE, PEAR, PLUM, CHERRY
PEACH, NECTARINE, APRICOT.

5 to 6 feet high, priced at.....\$ 5.00 each
6 to 8 feet high, priced at.....\$10.00 each

Standard Dwarfer Dwarf Fruit Trees

Just the trees for your Victory Garden. Whether your space is small or large—grow an orchard in your yard. Extremely Dwarf Fruit trees grow less than half as tall as standard size trees—bearing a generous crop of bigger, more luscious and richly colored fruit than larger trees do. No waiting years for fruit—dwarf fruit trees come into bearing very early—usually the second year after planting. Plant Dwarf fruit trees now and get extra new growth and perhaps fruit the first year—but, surely fruit the following year.

Leuthardt's Dwarfer Dwarf fruit trees are all healthy, hardy specimens, carefully chosen and tried for their suitability to this country's soil and climate. It will pay you to plant Northern grown fruit trees that have proven most satisfactory to growers throughout the United States because of the extra strength and hardiness our rigorous climate develops in them.

The Dwarf Apple trees we offer are grafted on the Juan de Metz root stock which is the pure strain selected by the East Malling Research Station in England and propagated in Canada. This root stock is the real dwarf understock making our trees very dwarf in growth and far superior in quality. Our pears are grafted on Quince, Peach, Apricot and Nectarine varieties on Almond and Cherries and Plums on Mahleb.

Select and grow the very choicest varieties which are neither to be obtained in the stores or never reach the markets because due to their very fine qualities they cannot be used commercially. Only the home owner can grow these special varieties and let the fruit stay on the trees until they have reached their peak of ripeness and flavor. Until you can enjoy picking and eating, tender, juicy, fully ripe fruit from your backyard—you will never know what the real fresh fruit flavor is like.

When you buy a Leuthardt's Dwarf fruit tree, you can rest assured you are dealing with a reliable house built through hard work, honesty and fair dealings. You will find our stock sturdy, heavy rooted, true to name and quality, and free from diseases. Our 17 years of progress, satisfied customers and repeated orders is our guarantee. You will be delighted with our fine class of nursery stock.

Apple

	<i>Each</i>
2 Year Old, 4 to 5 ft. high.....	\$2.00
